

Stable Release is Now Live!

Hi Mitratel Team,

We are excited to announce the official stable release of **Bliv**! The update brings enhanced stability, faster performance, and powerful new features across our system.

This release is now available for upgrade. If you would like to schedule an upgrade for your environment, please contact our team.

Because Bliv is a modular platform, updates for the modules included in your subscription are provided below. Additional updates from other available modules can be found in the "Other Platform Updates" section.

Version 2.3.0

- **Breaking Change:** No breaking changes are introduced in this release.
- **New Features & Improvements:**
 - Introduced **load balancer strategy** in connection.
 - Added parameter context control for improved execution handling.
 - Added “Terminate Task” option to immediately stop all running processes.
 - Added “Notify and Wait Task” to support controlled execution flow with notifications.
 - Introduced InfluxDB Custom Controller and Task for querying and inserting data.
 - Added version changes comparison feature to compare pipeline changes between current and previous versions.
 - DBCPConnectionPool Controller can add query param for JDBC connection string.
 - Improved Bliv Explore UX by adding lineage synchronization.
- **Bug Fixes:**
 - Upgraded user to superadmin role UX different from initial superadmin user.
 - Fixed task property inconsistency issue caused by mismatched or conflicting task configuration properties.
 - Fixed duplicate notifications when editing roles of pending members in project invitations.
 - Fixed issue where auto-enable controller status failed due to request timeout.
 - Fixed Wizard Setup issue that caused multiple dummy projects to be created.

bliv
dashboard

Version 1.3.0

- **Breaking Change:** No breaking changes are introduced in this release.
- **New Features & Improvements:**
 - Semantic Layer is now supported by Bliv Data House.
 - Introduced a new chart type: Pictorial Chart.
 - Enabled Chart Insight to support Indonesian language.
 - Added confirmation state when editing charts and dashboards to prevent loss of unsaved changes due to accidental back navigation.
- **Bug Fixes:** This release does not include any bug fixes.
- **Deprecation Notice:** The Virtualization menu will be deprecated in an upcoming release as its capabilities transition to Bliv Data House.

bliv
data house

Version 1.2.0

- **Breaking Change:** No breaking changes are introduced in this release.
- **New Features & Improvements:**
 - Added new instance types: Oracle and MariaDB.
 - Data Lakehouse Connector: Supports integration with InfluxDB, MinIO + Apache Iceberg, and Apache Hadoop.
 - Added virtualization capability to connect and query multiple databases as one instance.
 - Introduced Semantic Layer to provide a unified, business-friendly data model for consistent querying and analytics.
 - Added Row-Level Security (RLS) and Column-Level Security (CLS) to control data access by restricting rows and columns based on user department and permissions.
 - Import Data for Data Warehouse Instance
 - Improved RBAC level with clearer separation between global roles (Admin Panel) and resource-specific roles (per database).
- **Bug Fixes:** This release does not include any bug fixes.

Version 1.3.0

- **Breaking Change:** No breaking changes are introduced in this release.
- **New Features & Improvements:**
 - Added new Identity Provider (IDP) options: Github, LDAP, OIDC, and Microsoft
 - Revamp sidebar and navbar for unified design system with other services
- **Bug Fixes:**
 - Fixed UX errors occurring during user search.
 - Fixed errors when changing roles (Superadmin, Admin, Member).

Version 1.3.0

- **Breaking Change:** No breaking changes are introduced in this release.
- **New Features & Improvements:**
 - Added example alerting for service downtime.
 - Improved Bliv Monitoring by separating health checks into:
 - Pipeline Folder Health
 - Data House Folder Health
 - Public Dashboard for Service Health
- **Bug Fixes:** This release does not include any bug fixes.

Other Platform Updates

Bliv AI Studio version 1.2.0:

Key highlights of this release include the introduction of **Projects, Custom Tools** enhancements, **collaborative Canvas, Dark Mode**, and **improved agent** administration. This release also contains important **bug fixes** and requires **VectorDB migration** from Weaviate to pgvector for existing v1.1.x deployments.

Bliv MLOps version 1.2.0:

This release introduces **High Availability (HA) model** deployment, enabling models to be **deployed across multiple inference servers** with load balancing through HAProxy for improved reliability and scalability. It also **adds authenticated inference endpoints** to enhance security and access control.

Bliv Explore version 1.1.0:

This release significantly enhances Bliv Explore with **AI-powered metadata** discovery, **native MCP support**, **semantic search**, **impact analysis**, and **advanced governance capabilities**. It also introduces major architectural improvements, including **Airflow-less ingestion**, **distributed indexing**, and **enhanced data quality management**, while requiring an **Elasticsearch version upgrade**.
